Colorado, USA

WE DO NOT DESIGN LIGHT TO BE SEEN. WE DESIGN IT TO BE FELT.

At LED Linear™, every solution is designed, engineered and manufactured in Germany. Built around the specific requirements of each project, our lighting systems are developed for precision, reliability and long-term performance.

Our products deliver consistent results in everyday applications over exceptionally long lifetimes. From subtle accents to complex lighting concepts, every detail is created to integrate seamlessly into architecture and endure over time.

Applications

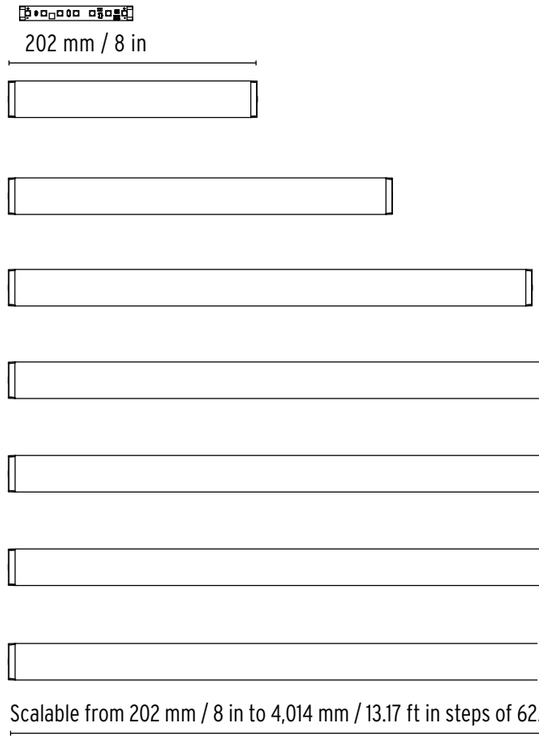

Our LEDs stand out for their excellent quality, optimal thermal management, precise current control, and comprehensive quality testing. Produced using our own reel-to-reel manufacturing process, these light engines are the heart of every lighting system, delivering exceptional light quality and consistency. Combined with advanced polyurethane encapsulation and extensive in-house validation, they ensure lasting protection and dependable operation in even the most challenging outdoor applications.

This enables ADONIS IP67 to be a compact linear LED system that performs at full scale. Configurable to the specific demands of every project, built for real-world performance in harsh environments and engineered to integrate seamlessly into any architectural line.

Configured around your vision.

TAILORED SOLUTIONS.

Scalable from 202 mm / 8 in to 4,014 mm / 13.17 ft in steps of 62.5 mm / 2.46 in and 264 mm to 4,014 mm in 83.3 mm steps for RGBW.

More than 1,000,000 options can be easily configured using our Product Finder.

ADONIS offers an enormous variety of features, including different light engines, various color temperatures and color rendering options, multiple light distributions and glare control solutions, as well as numerous installation possibilities. All of this is available with freely configurable luminaire lengths.

Masters challenging environmental conditions.

REAL-WORLD PERFORMANCE.

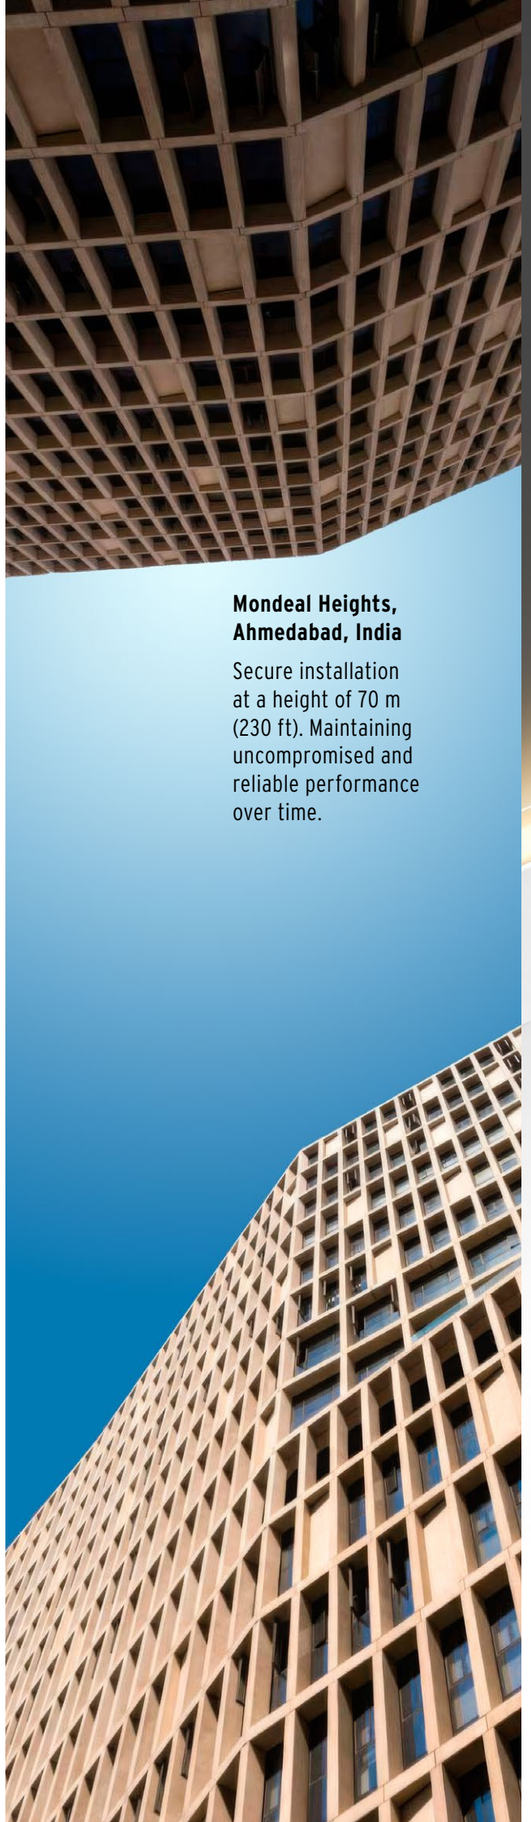

ADONIS doesn't just perform in perfect conditions. It's made for the extremes – exposed façades, harsh environments and challenging scenarios. Performance you can trust when conditions push everything to the limit.

IP67 water-resistant
Saltwater-resistant

UV-resistant
Ambient temperature: -25 °C to +50 °C

Lifetime: L80/B10 >102,000 h (light engine)

Safety options for high-rise façades

Mondeal Heights, Ahmedabad, India

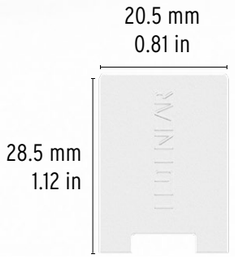

Secure installation at a height of 70 m (230 ft). Maintaining uncompromised and reliable performance over time.

Architectural lighting that enhances design.

SEAMLESS INTEGRATION.

Unbroken light from end to end brings consistent brightness across the full length.

ADONIS integrates without compromise. Minimal, clean, adaptable into any surface. No sacrifice. No interruption. Just light where the design requires it.

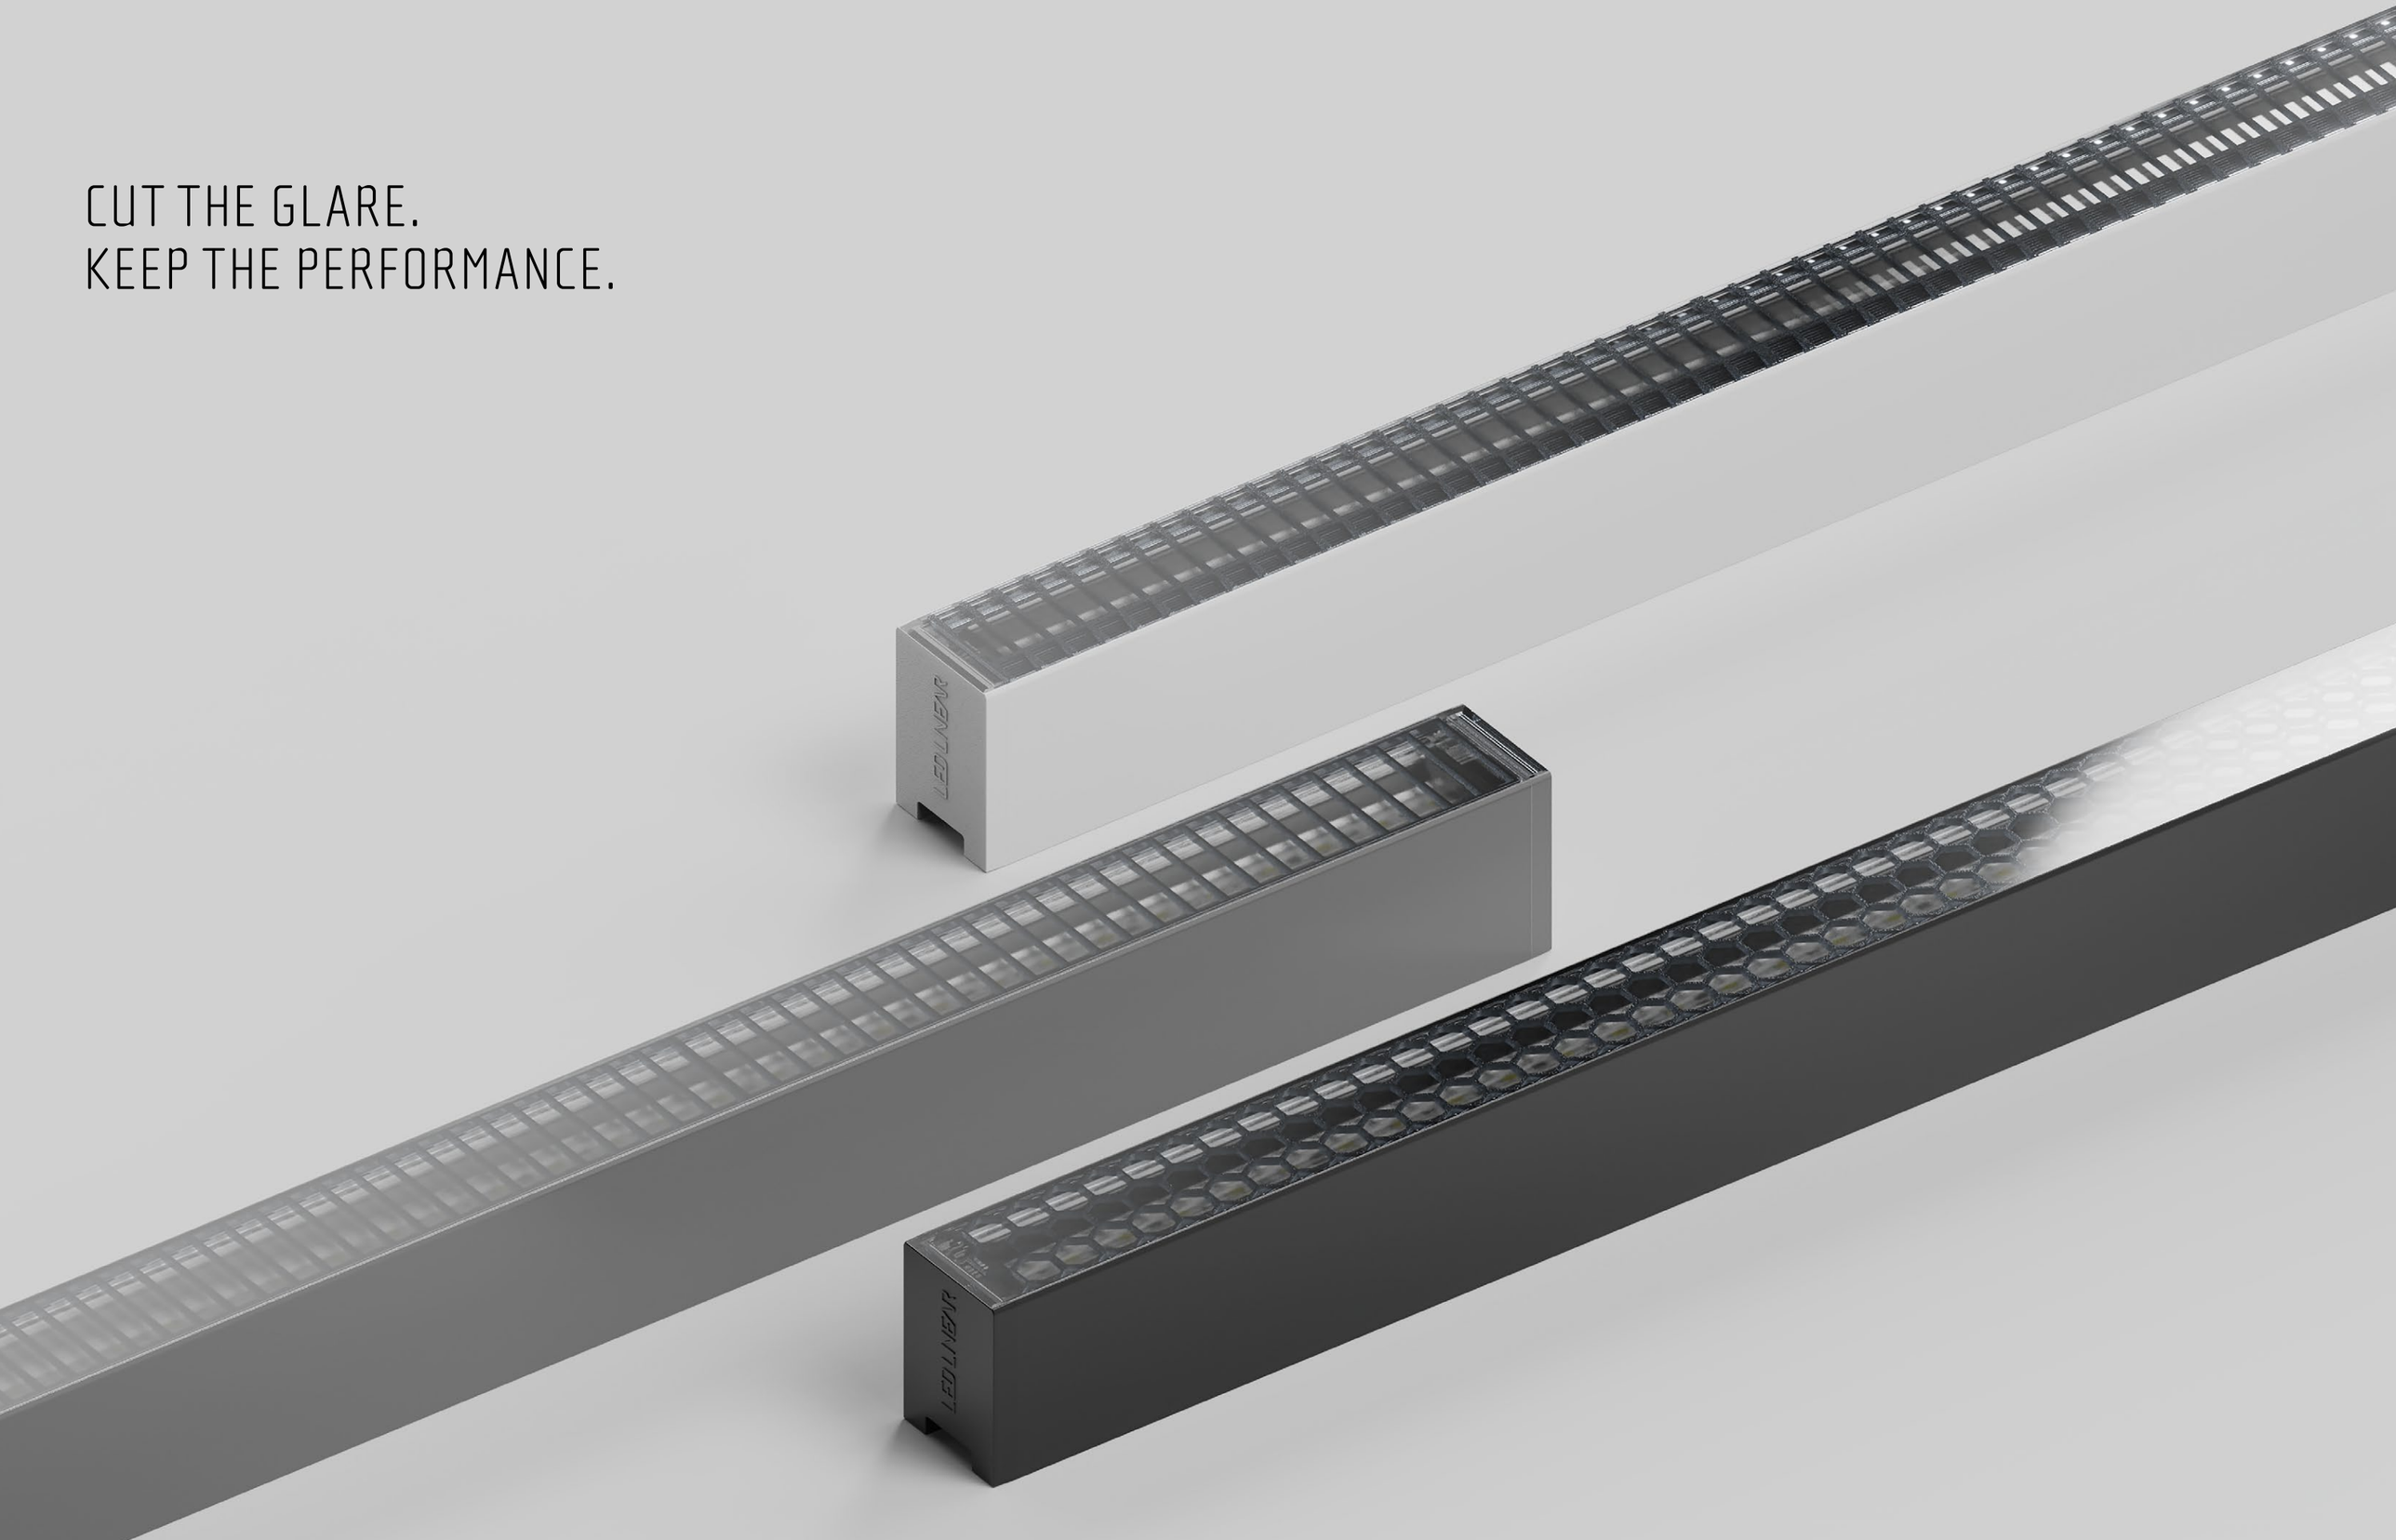

Scale 1:1

Invisible cabling of line installation within the luminaire profiles provides greater flexibility for different installation requirements.

CUT THE GLARE.
KEEP THE PERFORMANCE.

Visual comfort enabled by effective glare reduction

HOW TO USE.

Three integrated louver structures, fully encapsulated in polyurethane - cutting stray light to maximize visual comfort.

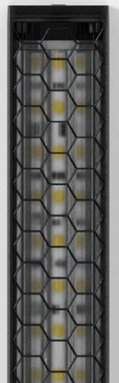

This louver controls glare from both sides. Viewers can look both along and across the light line without experiencing glare. Uniform brightness enables confident orientation in public spaces.

Maximum brightness with visual comfort. This louver reduces glare longitudinally along the light line. This allows full illumination to reach the façade while maintaining visual comfort at eye level.

Visible from all directions, this louver is designed not to hide the light but to shape it – creating atmosphere through deliberate contrast. Built for spaces where light itself is part of the design.

FLEXIBILITY IN INSTALLATION.

The wide range of installation options allows ADONIS to adapt to various applications with challenging requirements, delivering spatial continuity and formal consistency. Every configuration maintains full performance and precision with the same light quality.

Mounting options

1 Surface mounting with clip, horizontal
2 Surface mounting with adjustable clip
3 Surface mounting with mounting lock
4 Surface mounting with clip, vertical
5 Mounting with adjustable arm
6 In-ground mounting with frame
7 Additional glare shield

CREATING CONTINUOUS LIGHT.

A building's silhouette defines its character. Rooflines cut across the sky, edges create rhythm, corners define structure - but at night, these contours disappear into darkness. Light should reveal them, not flood the surface. Instead, it traces the building's outline: a precise line running along every architectural edge, following each contour. At a glance, the viewer understands the building's form. Geometry becomes visible. Architecture speaks through light alone - while the light source itself stays hidden.

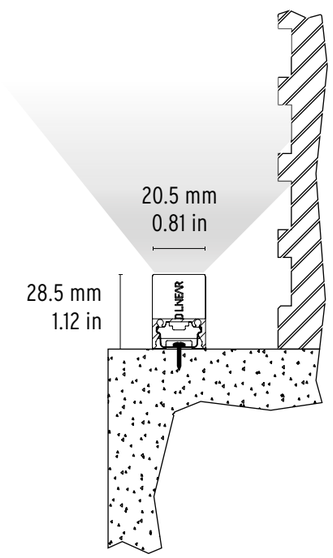

Installation
Opal encapsulation
100 % dot-free
CRI 85 at 2700 K
10 W/m with 51 lm/W
Surface-mounted with additional security
Gray-colored profile

Contour lighting
Light follows architectural edges, revealing the building's structure and form at night. ADONIS delivers this with unbroken precision, tracing columns, rooflines and corners while maintaining consistent brightness along every contour without visible gaps.

REVEALING FAÇADES AT NIGHT.

The prominent window frames are the façade's defining feature. At night, these horizontal lines should glow – illuminated to reveal their depth and three-dimensional quality. Grazing light runs along the top and bottom surfaces, emphasizing structure through shadow and dimension. Light should never spill into the window itself or up into the night sky. The interior stays dark; only the frames glow. The result is a floating effect that makes the window's structure visible.

Installation
10° linear lens
CRI 85 at 2200 K
5 W/m with 96 lm/W
Surface-mounted with clips
Gray-colored profile

Façade grazing
Precise grazing requires controlled light distribution. ADONIS directs light exactly where it is intended, enhancing architectural details while keeping unwanted light to a minimum. The optimized optics create clear contrasts, highlighting the structure with high efficiency.

GUIDING WITH LIGHT.

A landscape is beautiful in daylight. At night, that same beauty disappears into darkness. A path must remain visible, safe and inviting - yet the light source itself must vanish. No exposed fixtures interrupting the beauty of nature. No glare stealing the night sky. No artificial intrusion into the wilderness.

Light should guide safely through the darkness while preserving the feeling of being truly outside. Here, light belongs quietly, without announcing itself.

Installation
Soft diffuse encapsulation
Honeycomb louver
CRI > 80 at 2,500 K
10 W/m with 21 lm/W
In-ground installation
Gray-colored profile

Orientation lighting
Safe navigation through darkness requires visual comfort and confidence. ADONIS delivers soft, diffuse illumination through its encapsulated honeycomb louver, ensuring reliable guidance while keeping the light source discreet.
